DOCKETED

09-RENEW EO-1

TN # 75348

FEB 25 2015

Dear Sirs,

DRECP

I am interested to contribute to the debate as to effective renewable energy in the desert. I am concerned about the nature of the desert, the ecological system and wildlife which may not be fully understood or appreciated by those who do not live in the desert. I live here and have listened to and read reports and comments submitted by others.

I appreciate it is a very complicated matter but would simply say solar top and car-park solar as a Germany seems to be the best way forward. It doesn't upset the wildlife, leaves the ground fertile and is not obtrusive.

I understand the problems in administering such a scheme but it clearly can be done, as in Germany, and with a little more thought, effort and give by the energy companies we could have a very effective system of which this country could be proud. A very basic sensible approach needs to be taken to really share the resources we have to properly sustain us and our environment in the future. The desert is particularly special but also within a plan to safeguard the desert lies the basis for protecting the planet.

Please consider this option as a priority and make it work. It can and will be a triumph over all the other options which I appreciate have been carefully considered but which do not serve the purpose of creating a healthy environment for us and all who follow.

Yours truly,

Cl. M. MacInnes

(CHRISTINA MARY MACINNES)
