Subject: comments on DRECP document

California Energy Commission

DOCKETED

09-RENEW EO-1

TN 73964

NOV 10 2014

To whom it may concern,

I am writing to express the four following comments regarding the DRECP document:

1. A document of this length (8000 pages) and complexity cannot be adequately reviewed and evaluated by the public within the standard 90-day timeframe. This is an extraordinarily complex document that demands an extended period for public review—360 days—if the public process is to remain credible and not just a pro forma charade with a foregone conclusion.
2. There are 10 public hearings scheduled between October 20th and November 13th. San Diego’s hearing occurred on October 21st, less than 30 days after the publication of the 8000-page document. There should be another round of public hearings beginning 180 days after the publication of the Plan, i.e. the end of March 2015. This would give communities throughout the state time to digest and evaluate what the Plan means for them.
3. Borrego Springs is the largest community, and only community of any size, in San Diego County that is actually within the boundaries of the Plan. There should be a public hearing in Borrego Springs!
4. Rooftop solar technology has progressed significantly during the five years since the Plan was initiated. Given these advances, rooftop solar should be “brought forward for detailed analysis” on its technological and economic merits, rather than being dismissed because it is not utility-scale production in the desert.

Sincerely,

Daniel Winkler
