

**DOCKETED****09-RENEW EO-1**

TN # 75360

FEB 20 2015

Comments regarding: DRECP NEPA/CEQA:

Industrial power installations should be controlled by local zoning codes. Zoning should be used to protect the character of the desert . Dust control ? When they (usually foreign companies that have been contracted to scrape the solar panel sites), they will require more water from a drought stricken state . Disturbed land. Please scrutinize this land use and prefer barren fields ,such as ex farm land in Hinkley. This DRECP plan is too large of an area to open to power companies . It is too likely to be abused. Question , will California encourage businesses that will produce solar panels and installation hardware ?
