Subject: My comment on the Desert Renewable Energy Conservation Plan (DRECP)

Re: Desert Renewable Energy Conservation Plan (DRECP)

Sirs,
We have reviewed the plan and it leaves us aghast that public agencies don't value land stewardship. The future of public lands shouldn't be gigantic industrial operations, it needs to be the conservation of what is there this moment.
Besides the destruction of land, plants and animals, there is that factor of the mile upon mile eyesore that solar panels would open to the gaze of any viewer. We have seen them in the Mojave, We cringe.
Solar power needs to be developed close to metropolitan areas. First, lets start on any public or industrial rooftop. Or one can cover parking lots, with panels. Solar operators get a free ride of public land leasing. We don't want our public lands destroyed for their profit.
We am against further solar power developments on public lands.

Sincerely
Joe Cernac
Barbara Coleman
