Dear Members of the Commission:

I have noticed that the proposal to vastly increase solar and wind power in California deserts is written to dismiss thoroughly considering the alternative of rooftop solar power generation. I'm writing to ask you to insist that rooftop solar be given a thorough and unbiased review, and to put the public interest ahead of the interest in utilities' interest in profiting from alternatives that permanently ruin pristine desert and commit irreversible environmental damage. The best way to do th is is to extend the time for the pubic to comment, and to allow people to learn about the consequences, both economic and environmental, of the several alternatives.

Thank you,
Ralph and Nancy Batie
